DETAILED ACTION

1. Applicant's response along with the Request for Continued Examination (RCE) has been fully considered. Claim 4 is amended, claims 1-3 are canceled, and claims 4-6 are pending.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Inoue et al. (US 2003/0207088 A1) in view of Ota et al. (JP 2001-088430).

4. Inoue teaches an ink jet recording panel comprising a transparent substrate film [0035] and a light transmitting ink reception layer [0036]. An ink jet ink is printed on a portion of the ink jet reception layer ([0041] and Fig. 1B). The portion that is not provided with the ink jet ink meets the claimed transparent portion. Inoue does not teach that the ink reception layer contains at least one of the claimed benzotriazole.

5. Ota teaches an ink jet recording material comprising a transparent base material [0018] and an ink absorbing layer provided on the base material, wherein the ink absorbing material comprises one or more of benzotriazole compounds listed in paragraph [0009]. The amount of the benzotriazole compound in the ink absorbing layer is 2-15 wt% [0015].

6. Inoue and Ota are analogous art because they are from the same field of endeavor that is the ink jet recording art. At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine the benzotriazole compound of Ota with the invention of Inoue, and the motivation for combining would be, as Ota suggests, preventing bronzing of the printed surface (abstract).

Response to Arguments

7. Applicant's arguments with respect to claims 4-6 have been considered but are moot in view of the new ground(s) of rejection.
